

Definition of bias

Estimator Quality

$$\text{bias}_{\hat{\theta}}(\theta) = \mathbf{E}[\hat{\theta}] - \theta$$

Lesson 25, page 311, formula (25.1)

115B

Bias of sample mean

Estimator Quality

0

Lesson 25, page 311

116B

Bias of biased sample variance

Estimator Quality

$$\text{bias}_{\hat{\sigma}^2}(\sigma^2) = -\frac{\sigma^2}{n}$$

Definition of consistency

Estimator Quality

Consistency means that the probability that the estimator is different from the parameter by more than ϵ goes to 0 as the sample size goes to infinity.

Sufficient condition for consistency

Estimator Quality

Estimator is asymptotically unbiased and its variance goes to 0 as the sample size goes to infinity.

*Definition of relative efficiency of estimator θ_1
to estimator θ_2*

Estimator Quality

$$\frac{\text{Var}(\hat{\theta}_2)}{\text{Var}(\hat{\theta}_1)}$$

Lesson 25, page 313, formula (25.2)

120B

Definition of mean square error of estimator

Estimator Quality

$$\text{MSE}_{\hat{\theta}}(\theta) = \mathbf{E}[(\hat{\theta} - \theta)^2]$$

Lesson 25, page 313, formula (25.3)

121B

Formula for mean square error

Estimator Quality

$$\text{MSE}_{\hat{\theta}}(\theta) = \text{bias}_{\hat{\theta}}(\theta)^2 + \text{Var}(\hat{\theta})$$

Lesson 25, page 313, formula (25.4)

122B

★★

Definition of UMVUE

Estimator Quality

A uniformly minimum variance unbiased estimator is an unbiased estimator has the lowest variance of any unbiased estimator regardless of the true value of θ , the estimated parameter.

Definition of exponential family

Extended Linear Model

$$f(y; \theta) = \exp(a(y)b(\theta) + c(\theta) + d(y))$$

Lesson 43, page 640, formula (43.2)

220B

Canonical form of exponential family and natural parameter

Extended Linear Model

Canonical form: $a(y) = y$
Natural parameter: $b(\theta)$

Examples of members of exponential family

Extended Linear Model

- *binomial*
- *normal*
- *Poisson*
- *exponential*
- *gamma*
- *inverse Gaussian*
- *negative binomial*
- *compound Poisson/gamma*

$E[Y]$ for Y exponential in canonical form

Extended Linear Model

$$\mathbf{E}[Y] = -\frac{c'(\theta)}{b'(\theta)}$$

★★

$\text{Var}(Y)$ for Y exponential in canonical form

Extended Linear Model

$$\text{Var}(Y) = \frac{b''(\theta)c'(\theta) - c''(\theta)b'(\theta)}{\left(b'(\theta)\right)^3}$$

Definition of Tweedie distribution

Extended Linear Model

$$\text{Var}(Y) = \alpha \mathbf{E}[Y]^p$$
